## FORMULA FOR TAP/DRILL SIZES

## (INCH)

METHOD 1

| Drilled Hole Size (in.) $=$ Basic Major Dia. of Thread (in.) $-\frac{.013 \times \% \text { of Full Thread* }}{\# \text { of Threads per Inch (T.P.I.) }}$ <br> * Use whole number for \% of thread...for 65\%, use 65 (not .65). |
| :--- |

METHOD 2
Nominal O.D. - (Dbl. Thread Depth X \% of Full Thread) = Drilled Hole Size
EXAMPLE: To find the hole size for obtaining $75 \%$ of thread in a $1 / 4-20$ tapped hole, follow first column down to 20 threads, then across to $75 \%$ of thread. This figure (.0485), when subtracted from the .250 diameter, is .2015, which is the required diameter of hole. See equation: $.250-.0485=.2015$

To figure whether or not pitch is too coarse for diameter:
(Double thread depth) $X 3=x$
$x=$ the smallest diameter possible for that T.P.I.

| Threads <br> per Inch | Double <br> Thread <br> Depth | $50 \%$ <br> Thread | $55 \%$ <br> Thread | $60 \%$ <br> Thread | $65 \%$ <br> Thread | $70 \%$ <br> Thread | $75 \%$ <br> Thread | $80 \%$ <br> Thread | $85 \%$ <br> Thread |
